

Candy Collection

Candy's sweeping curves, clean lines, and material relationships allow for expressive and cohesive compositions. Continuous straight, curved, or serpentine groupings extend Candy into the realm of boundary creation, helping shape interior space.

Product Story

Drawing from designer Carole Baijings' work as a colorist, Candy offers an expressive fusion of shape and color. The collection's form is born from analog experimentation and is enriched by chromatic shifts and layered compositions. Candy's continuous modular elements reveal opportunities for a diverse range of interior compositions such as serpentine curves, freestanding islands, and straight banquette or café seating.

Designer Story

Carole Baijings is a champion of the "atelier way of working"—hand-mixing colors, developing her own materials, and crafting models to achieve distinctive designs. She is widely regarded as one of the most exciting, innovative, and dynamic industrial designers in Europe. A self-confessed perfectionist, her work—which includes ceramics, glassware, textiles, furniture, and electronics—is distinguished by a carefully considered use of color, pattern, and graphic elements. Throughout her career Baijings has partnered with numerous industry-leading brands and featured her work in prestigious art institutions around the globe.

Sequenced Installation

Candy elements install like a system. Bases are joined, leveled and wired, and upholstered assemblies then attach to the plinth base. This unique sequence considers the challenges often faced with modular lounge, allowing for easy and fast installation.

Visual Simplicity

Long sweeping curves and extended length segments minimize dividing lines between units to evoke a sense of clarity and calm.

Compositional Landscape

Candy's soft shapes and clean lines combine with expressed plinths and backs to create exciting compositions of materials, colors and finishes.

Architectural Qualities

With its prominent veneer or laminate back option, Candy offers architectural qualities that define, divide and enhance space.

True Modularity

All Candy units are fully upholstered and finished on all sides. Combined with concealed ganging, this allows for day 2 or day 200 reconfiguration without the need for new parts or components.
